Dallas-Fort Worth Fertility Associates

To schedule your appointment call:

Dallas Office: 214-692-4500

Southlake Office: 817-442-5510

PATIENT INSTRUCTIONS FOR SEMEN SPECIMEN COLLECTION

Appointments:

An appointment must be made in advance for all semen analysis. Please call our office to schedule an appointment with DFW Fertility Associates. If you are more than 15 minutes late to your appointment may need to be rescheduled. A signed Laboratory Requisition is required from a physician.

Identification:

Please be prepared to provide a picture identification for security and quality control purposes.

Abstinence:

For semen analysis, an **abstinence period of at least 48 hours but no more than 5 days is advised**. Please refrain from ejaculation by any method during this abstinence period. Abstinence periods outside this range may yield unreliable results and may necessitate repeating the test.

Collection:

A sterile, clean specimen is important. Before coming to DFW Fertility Associates, please wash the genital area thoroughly. Collect the specimen by masturbation into a sterile specimen container (which will be provided by DFW Fertility Associates or by your physician's office). Other methods of collection may result in a contaminated specimen and may not provide a reliable or representative analysis. **Household containers should not be used as they can be toxic and result in an inaccurate semen analysis. Similarly, please do not use lubricants as they also can be detrimental to sperm.** If you feel you absolutely need a lubricant, DFW Fertility Associates can provide you with a non-toxic lubricant. If you use lubricant, take extreme care not to get any into the specimen container. Use the smallest amount of lubricant possible. Ejaculate entire specimen into the specimen container without touching the interior. Put the lid on tightly and label the container with your name.

Specimen Delivery:

It is best to collect specimens at DFW Fertility Associates, but specimens may be collected at home if brought to the office within 45 minutes of the collection time. The specimen should be kept near body temperature during transport without exposure to extreme heat or cold. Test results will be sent to the requesting physician rather than given directly to the patient.

Financial:

There will be a fee of \$90.00 for semen analysis.
